

**Amendments to the Specification:**

Please amend the Abstract as follows:

Abstract

~~{Problem}~~

~~To provide~~ Disclosed is a labeling substance capable of reversibly immobilizing (reversible detachment) to a solid surface and to reliably and accurately identify a target biological substance interacting with a probe substance bound to the labeling substance. ~~{Solving Means}~~  
A chimeric compound is provided, which includes a labeling substance L including (1) an organic compound S with a chemical structure capable of binding to a probe substance P, which can interact with a biological substance B and (2) a peptide bound to the organic compound S and specifically recognized by an antibody A, peptide and a probe substance P at least except a peptide or protein. In addition, a method for preparing the labeling substance L and a method for capturing, structurally analyzing and/or identifying the biological substance using the labeling substance L are provided. ~~{Selective Drawing}~~ Fig. 2
